

TO SET THE NEEDLE BAR AT THE CORRECT HEIGHT

To check the height of the needle bar, remove the needle and turn the balance wheel over toward you until the needle bar is at its lowest position.

When the needle bar is in this position, the distance from the bottom of needle stop screw C, Fig. 14, to the top of the throat plate should be approximately $1\frac{1}{8}$ inch, as shown in Fig. 14.

If the needle bar is not set at the correct height, loosen the two screws D, Fig. 14 and raise or lower the needle bar as required, then securely tighten the screws D.

Unless the needle bar is bent or worn, the range of this adjustment (approximately $\frac{1}{8}$ inch) is usually sufficient.

When the needle bar cannot be adjusted as described above, the needle bar, needle bar cam, roller and stud should be checked for need or placement.

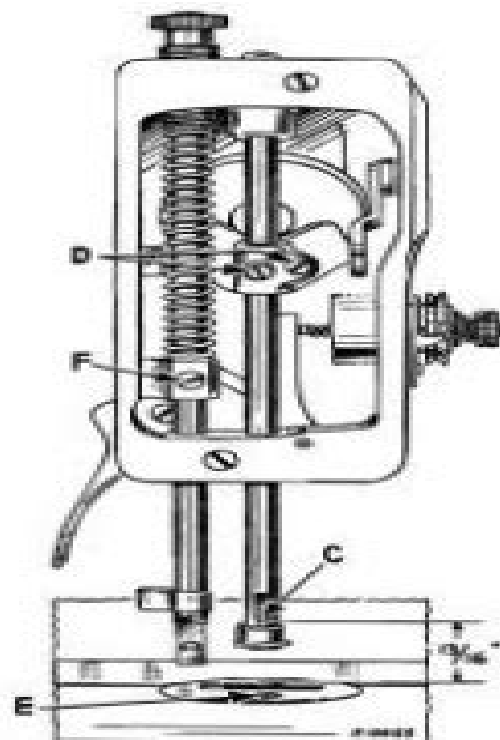

Fig. 14. Setting the Needle Bar

CORRECT THE LOCATION OF THE NEEDLE IN RELATION TO THE THROAT PLATE

When the needle enters the needle hole in the throat plate, the short-grooved side of the needle should be close to the right side of the needle hole, as shown in Figs. 13 and 15. This location of the needle leaves sufficient clearance for the needle thread, as the size of the needle increases toward the left.

At no time should the needle either touch the edge of the needle hole or locate in the center of the needle hole.

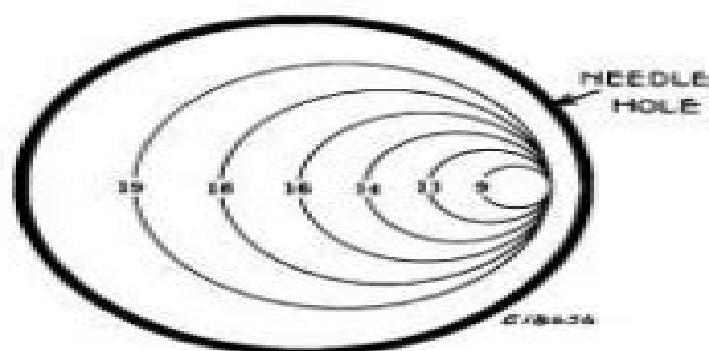

Fig. 15. Location of Needle in Relation to Throat Plate and Relative Positions of Each Size of Needle
