The Arctic and World Order Kristina Spohr, Daniel S. Hamilton, Jason C. Moyer, 2021-01-26 The Arctic long described as the world's last frontier is quickly becoming our first frontier the front line in a world of more diffuse power sharper geopolitical competition and deepening interdependencies between people and nature A space of often bitter cold the Arctic is the fastest warming place on earth It is humanity's canary in the coal mine an early warning sign of the world's climate crisis The Arctic regime has pioneered many innovative means of governance among often contentious state and non state actors Instead of being the last white dot on the map the Arctic is where the contours of our rapidly evolving world may first be glimpsed In this book scholars and practitioners from Anchorage to Moscow from Nuuk to Hong Kong explore the huge political legal social economic geostrategic and environmental challenges confronting the Arctic regime and what this means for the future of world order

Snyder, 2012-08-30 This book provides readers with a broad understanding of the fundamental principles driving atmospheric flow over complex terrain and provides historical context for recent developments and future direction for researchers and forecasters The topics in this book are expanded from those presented at the Mountain Weather Workshop which took place in Whistler British Columbia Canada August 5-8 2008 The inspiration for the workshop came from the American Meteorological Society AMS Mountain Meteorology Committee and was designed to bridge the gap between the research and forecasting communities by providing a forum for extended discussion and joint education For academic researchers this book provides some insight into issues important to the forecasting community For the forecasting community this book provides training on fundamentals of atmospheric processes over mountainous regions which are notoriously difficult to predict The book also helps to provide a better understanding of current research and forecast challenges including the latest contributions and advancements to the field The book begins with an overview of mountain weather and forecasting challenges specific to complex terrain followed by chapters that focus on diurnal mountain valley flows that develop under calm conditions and dynamically driven winds under strong forcing The focus then shifts to other phenomena specific to mountain regions Alpine foehn boundary layer and air quality issues orographic precipitation processes and microphysics parameterizations Having covered the major physical processes the book shifts to observation
