## **Situational Awareness For Emergency Response:**

**Situational Awareness for Emergency Response** Richard Gasaway, 2013 Situational awareness is more complex than simply noticing what is happening around you. An emergency responder must capture clues and cues in the emergency environment, make sense of the information, and predict what will happen next. In *Situational Awareness for Emergency Response*, Richard Gasaway establishes the foundation of decision making and the role of situational awareness in high risk public safety environments. He explains his original research on command decisions and the barriers that challenge a commander's situational awareness and offers lessons learned and best practices that can assist responders in preventing or overcoming the situational awareness barriers. *Situational Awareness for Emergency Response* is an ideal resource for incident commanders, line personnel who make high stress decisions, and students learning to develop and maintain situational awareness.

**Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations** Institute of Medicine, Board on Health Sciences Policy, Committee on Guidance for Establishing Standards of Care for Use in Disaster Situations, 2009-09-23 The influenza pandemic caused by the 2009 H1N1 virus underscores the immediate and critical need to prepare for a public health emergency in which thousands, tens of thousands, or even hundreds of thousands of people suddenly seek and require medical care in communities across the United States. *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations* draws from a broad spectrum of expertise including state and local public health, emergency medicine, and response, primary care, nursing, palliative care, ethics, the law, behavioral health, and risk communication to offer guidance toward establishing standards of care that should apply to disaster situations both naturally occurring and man-made under conditions in which resources are scarce. This book explores two case studies that illustrate the application of the guidance and principles laid out in the report. One scenario focuses on a gradual onset pandemic flu. The other scenario focuses on an earthquake and the particular issues that would arise during a no-notice event. Outlining current concepts and offering guidance, this book will prove an asset to state and local public health officials, health care facilities, and professionals in the development of systematic and comprehensive policies and protocols for standards of care in disasters when resources are scarce. In addition, the extensive operations section of the book provides guidance to clinicians, health care institutions, and state and local public health officials for how crisis standards of care should be implemented in a disaster situation.

**Essential Emergency Procedures** Kaushal Shah, Chilembwe Mason, 2007-09-01 This portable quick reference handbook gives residents, medical students, and practitioners a bedside refresher on the key components of 86 procedures used in emergency medicine. Procedures are grouped by organ system, with additional sections on nerve blocks and pediatric procedures. Unique to this handbook is a section on limited goal directed bedside ultrasonography and echocardiography procedures that are an integral part of emergency medicine care and trauma assessment and are not described in detail in any other handbook. Each procedure is presented in a similar format: indications

contraindications risks consent issues anatomic landmarks technique precautions and pearls More than 300 illustrations complement the text *Designing for Situation Awareness* Mica R. Endsley, Betty Bolte, Debra G. Jones, 2003-07-17

Enhancing Situation Awareness SA is a major design goal for projects in many fields including aviation ground transportation air traffic control nuclear power and medicine but little information exists in an integral format to support this goal

Designing for Situation Awareness helps designers understand how people acquire and interpret information in complex settings and recognize the factors that undermine this process Designing to support operator SA reduces the incidence of human error which has been found to occur largely due to failures in SA Whereas many previous human factors efforts have focused on design at the perceptual and surface feature level SA oriented design focuses on the operator's information needs and cognitive processes as they juggle to integrate information from many sources and achieve multiple competing goals Thus it addresses design from a system's perspective By applying theoretical and empirical information on SA to the system design process human factors practitioners can create designs to support SA across a wide variety of domains and design issues This book serves as a helpful reference to that end *Developing and Maintaining Emergency Operations Plans*

United States. Federal Emergency Management Agency, 2010 Comprehensive Preparedness Guide CPG 101 provides guidelines on developing emergency operations plans EOP It promotes a common understanding of the fundamentals of risk informed planning and decision making to help planners examine a hazard or threat and produce integrated coordinated and synchronized plans The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas This Guide helps planners at all levels of government in their efforts to develop and maintain viable all hazards all threats EOPs Accomplished properly planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis determining required capabilities and establishing a framework for roles and responsibilities It shapes how a community envisions and shares a desired outcome selects effective ways to achieve it and communicates expected results Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain **Disaster Operations and Decision Making**

Roger C. Huder, 2013-01-22 The only book to combine emergency management principles with proven military concepts Good disaster plans do not guarantee a good response Any disaster plan rarely survives the first rain bands of a hurricane or the first tremors of an earthquake While developing plans is essential there must be systems in place to adapt these plans to the ever changing operational environment of a disaster Currently there is no set of standard disaster response principles to guide a community The National Incident Management System NIMS and the Incident Command System ICS provide the framework to implement operational decisions but they were never designed as operational concepts The military has developed just such concepts and many of them can be adapted for civilian use Disaster Operations and Decision Making adapts those military concepts and combines them with disaster lessons learned to create a new operational paradigm

Emphasizing team building Emergency Operations Center operational systems and situational awareness the book details easily adopted methods All of these methods are designed to be incorporated into the NIMS and ICS framework to enhance a community's response to any type of disaster Disaster Operations and Decision Making is an essential resource for emergency managers fire chiefs law enforcement officers homeland security professionals public health officials and anyone else involved or interested in crisis management **Is-42** Fema,2013-10-31 Social media is a new technology that not only allows for another channel of broadcasting messages to the public but also allows for two way communication between emergency managers and major stakeholder groups Increasingly the public is turning to social media technologies to obtain up to date information during emergencies and to share data about the disaster in the form of geo data text pictures video or a combination of these media Social media also can allow for greater situational awareness for emergency responders While social media allows for many opportunities to engage in an effective conversation with stakeholders it also holds many challenges for emergency managers The purpose of this course is to provide the participants with best practices including tools techniques and a basic roadmap to build capabilities in the use of social media technologies in their own emergency management organizations State local Tribal in order to further their emergency response missions By the end of this course participants will be able to Explain why social media is important for emergency management Describe the major functions and features of common social media sites currently used in emergency management Describe the opportunities and challenges of using social media applications during the 5 phases of emergency management Describe better practices for using social media applications during the 5 phases of emergency management Describe the process for building the capabilities and to sustain the use of social media in an emergency management organization State local tribal territorial
