The analysis of practical skills W.T. Singleton,2013-06-29 The origins of this book are in my first attempts to understand psychology as a post war student in the Cambridge of the late 1940s Sir Frederic Bartlett and his colleagues in the Psychology Department were talking and writing about the concept of the skill as the fundamental unit of behaviour This made entire sense to me but not apparently to very many other people because the movement dwindled rapidly with the retirement of Sir Frederic in 1952 It got lost within performance studies which were essentially behaviouristic and stimulus response in origin a quite different style of thinking from the gestalt approach of skill psychology This is not a simple dichotomy of course and skill psychology does go some way towards the analytic approach in accepting that a science needs to have a basic element a unit from which the complexities of real behaviour can be constructed into which it can be analysed and in terms of which it can be described and understood The trick is to pick the right unit and I think that skills is an appropriate unit for human behaviour Note the plural although these units are elements they are not identical any more than the ninety odd elements of the physical world are identical The issue is sometimes clarified by considering the analogy with the attempt to describe a house The simplest observable elements here are the brick the piece of stone or the piece of wood

Dynamics of Regional Integration Uwe Walz, 2012-12-06 Deepening and enlarging regional integration blocs is high on the political agenda as can be seen most notably in the last decade of the European integration process The effects of this process have been studied extensively But until recently these studies have been limited to the theoretical analysis of static effects of regional integration The revival of growth theory has however in principle provided a set of models and tools which allow to investigate the dynamic effects of regional integration At the same time the new regional economics or economic geography literature allowing to focus on the special features of regional integration and integration blocs has

emerged The aim of this study is to merge endogenous growth approaches with new regional economics models in order to investigate various aspects of the long run effects of regional integration in a dynamic general equilibrium framework It is needless to say that such an analysis can cover only selected issues and leaves others aside It is the purpose of the present study how ever to look at both types of regional integration the dynamic effects of a deepening of the integration process as well as of an enlargement of the integration bloc This is done on the basis of an investigation of empirical regularities of regional developments in an integration bloc mainly in the European Union
