**Skin Lymphoma** Lorenzo Cerroni, 2020-07-14 Many things have changed since 2014 when I completed the previous edition of this book The World Health Organization WHO published in 2017 an update of the Classification of Tumours of Haematopoietic and Lymphoid Tissues and in 2019 the European Organization for Research and Treatment of Cancer EORTC together with a WHO panel published the first update since 2005 of the Classification of cutaneous lymphomas In the new classifications all entities of cutaneous lymphomas have been

updated and some new ones were added In this context the book has been modified to reflect the new classification schemes Molecular data are being increasingly used for diagnosis and classification of haematological malignancies particularly for precise categorization of leukemias On the other hand access to state of the art molecular techniques is still very limited in fact the vast majority of colleagues who report cases of cutaneous lymphoproliferative disorders make diagnoses based mostly on histopathological and phenotypical features combined with clinical aspects thus the core of the book is still focused on a traditional clinicopathological approach to diagnosis All relevant molecular data of course are discussed as well An Atlas of Hair Pathology with Clinical Correlations Leonard C Sperling, Shawn E.
